

Inkjet

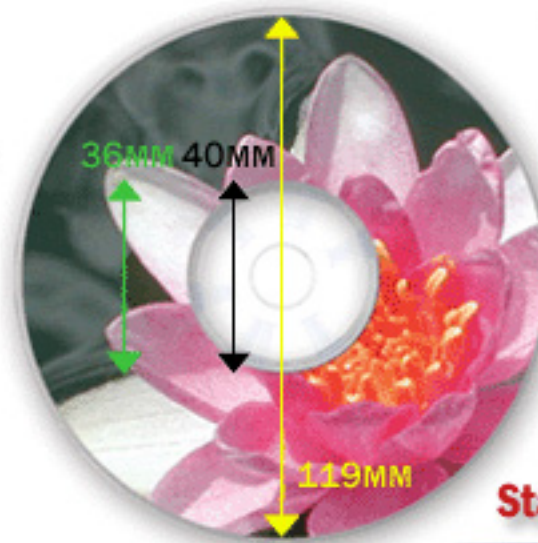

The Verbatim inkjet lineup consists of a range of printable CDR and DVDR media with a variety of options for the end user, including, white inkjet and a unique silver inkjet. The silver inkjet surface results in an iridescent appearance after printing. Offering exceptional color reproduction of high-resolution photos, graphics or other images, Verbatim inkjet media ensures excellent ink absorption and longer lasting vibrant colors. Inkjet printable discs are available in standard, as well as hub-printable which allows for full-surface edge-to-edge printing. Edge-to-edge printable discs extend the printing area into the center area of the disc giving an improved appearance to the final look. Verbatim inkjet printable media is certified for use with color inkjet printers including Primera, Epson and Microboards.

Thermal

Verbatim's white and crystal thermal printable discs consist of surface that is optimized for thermal printing resulting in high-resolution reproduction of graphics, text and logos. Thermal printable discs are available in standard, as well as hub-printable which allows for full-surface edge-to-edge printing. Verbatim thermal printable media is fully compatible with multi-color and mono-color thermal disc printers including Rimage, Teac, and other leading thermal printer manufacturers.

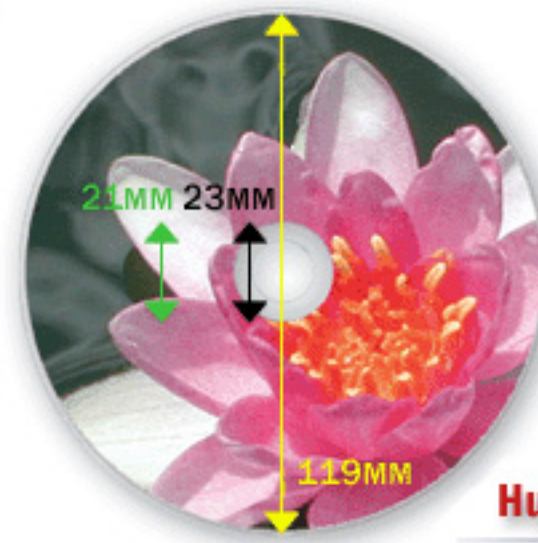

Silk-screening

Providing the ideal surface for silk-screening by duplicators, Verbatim's Silk-screening media delivers both high quality and high-speed recording performance. Tested and certified by leading drive manufacturers, Verbatim discs are high speed, reliable and error-free.
